

WHY ARE MY FIRE DOORS IMPORTANT?

Your fire doors will keep fire and smoke contained in a 'compartment' and stop it spreading for a short while. This gives you time to escape.

When fire breaks out, a fire door can save your life, but only if it's working properly. ⚠️

- Red Kite and our contractors install fire doors to the right standards. You should tell us immediately if you spot something wrong so we can fix it straight away
- Fire doors should never be propped open. This includes the front entrance door to flats
- The self-closing device is designed to keep you safe. Never tamper with it or remove it
- Please take a look at the fire action notice in your block.
